

Get to Know the Dolphin Skin Trend

Dolphin skin is considered one of the hottest beauty trends nowadays. With this trend, it will be a makeup that focuses on the skin's glow in a way resembling to the sparkle on the skin of a dolphin. This trend was created by Mary Phillips, a famous Hollywood makeup artist, who described the look as glistening, hydrated and fresh out of the water. To get the wet look of dolphin skin, use a dewy product, shimmer and highlighter to add dimension to the face. In addition to makeup, using skincare products is another way to get dolphin skin. What are they? Let's go see.

1. Start your skincare routine by using a makeup remover to remove makeup as the first step and a facial cleanser to remove any remaining impurities as the second step.
2. Next, use gentle exfoliating products such as a toner containing AHA to improve skin cell turnover which is a key factor in creating radiant and healthy skin.
3. Apply an intensive moisturizer such as a hyaluronic acid serum, follow by a sunscreen product every day.

With this skin care regime, your skin will have a radiant and dewy appearance like dolphin skin.
